## Connecting the scanner

Connect the appropriate interface cable to the scanner first, then to the computer

## Turn on/ Turn off configuration barcode

When the configuration function is turned on, all of configuration barcodes can be used.

When the configuration function is turned off, other configuration barcodes cannot be used. You need to turn on configuration function again

Turn on configuration function(Default)

Turn off configuration function

## Version

Version

## Setting Product Defaults

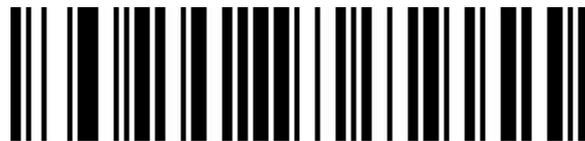

Scan the barcode below to restore factory defaults

Restore factory defaults

## Setting Custom Defaults

Scan the barcode below to save the current parameters as a user configuration.

Save Custom Defaults

Scan the barcode below to restore saved user configuration.

Restore Custom Defaults

## Interface

**The scanner supports USB HID,USB to serial port, RS232 mode.**

Scan the following barcode to configure the scanner for USB PC/USB MAC keyboard mode.

Scan the following barcode to configure the scanner for serial port mode.

Scan the barcode below to configure the scanner from USB to serial port mode. (Please request the driver from seller)

# Keyboard configuration

## Control Character Escape

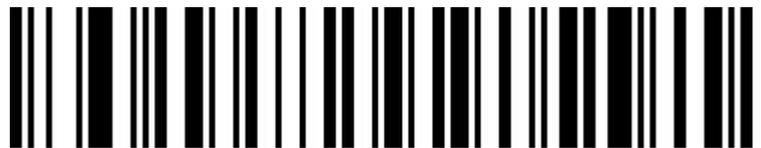

Control Character Escape On

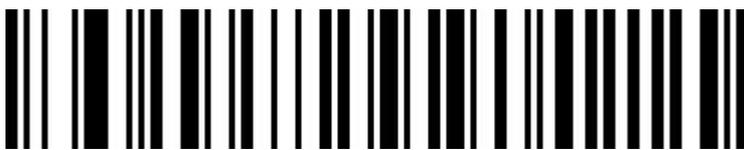

Control Character Escape Off \*

## Carriage Return / Line Feed (USB keyboard)

0A ( LF ) Only

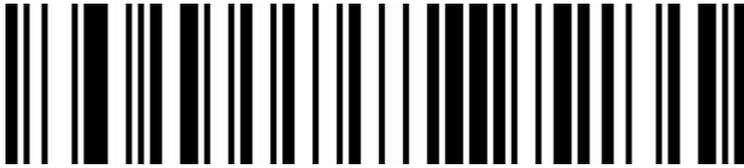

0D ( CR ) \* Only

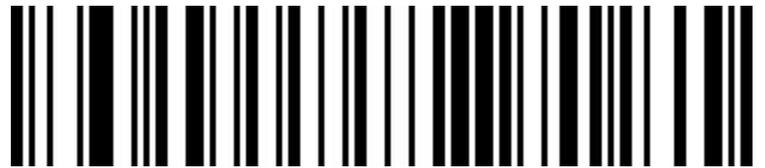

0A(LF) & 0D(CR)

## Speed of USB keyboard transmission

It is used to configure the speed when transferring data in USB keyboard mode. If the PC with low performance, it is better to choose “low speed” to ensure accurate transmission.

Low\*

Medium

High

Custom ( 2ms~50ms )

## USB keyboard case output control

Normal\*

Mixed Case Reversal

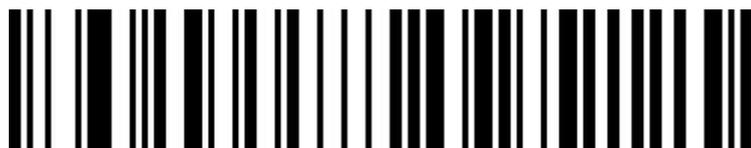

All Caps

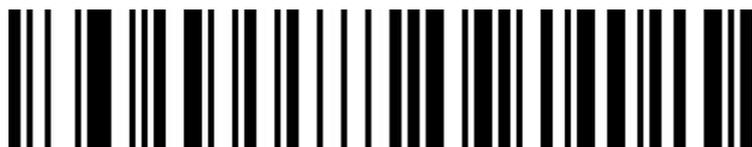

All Lower-case

## Keyboard Layouts

English (United States) \*

French (France)

Italian (Italy)

Italian 142 (Italy)

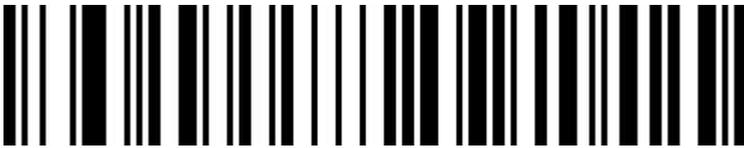

German (Germany)

Spanish (Spain)

Spanish (Latin America)

Finnish

Japanese

Russian (MS)

Russian (typewriter)

Arabic (101)

Irish

Polish (214)

Polish (Programmers)

Dutch (Netherlands)

Czech (QWERTZ)

Portuguese (Portugal)

Portuguese (Brazil)

Swedish (Sweden)

Turkish Q

Turkish F

Greek (MS)

French (Belgium)

English (UK)

## Virtual keyboard

Mode 1: The characters between 0x20 ~ 0xFF under the current keyboard layout are not supported using virtual keyboard output . The characters between 0x00 ~ 0x1F are output according to the definition of control characters (see appendix)

Mode 2: All characters between 0x20 ~ 0xFF are output by virtual keyboard, and characters between 0x00 and 0x1F are output according to the definition of control characters (see appendix)

Mode 3: All characters used between 0x00 ~ 0xFF are output by virtual keyboard

Virtual keyboard turn off (default)

Virtual keyboard turn on(MODE 1)

Virtual keyboard turn on(MODE 2)

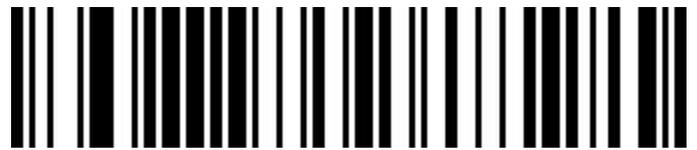

Virtual keyboard turn on(MODE 3)

## Host operating system selection in virtual keyboard mode

WINDOWS ( Default )

MAC OS

LINUX

## Output Encoding Format

In order to output data correctly according to the specified encoding format, It need to specify the output encoding format,such as simplified chinese output in Notepad / excel, configuring the format into GBK . In word,configuring the format into UNICODE.

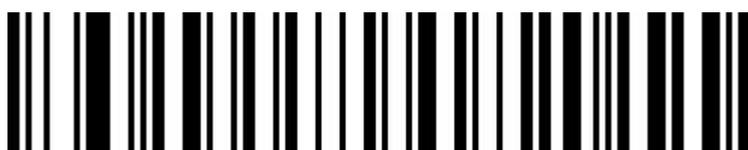

When the output encoding format is English/Latin-1, the output mode of the USB keyboard is affected by the virtual keyboard function on/off, When the output encoding format is GBK / UNICODE , the output mode of the USB keyboard is forced to be the virtual keyboard output.

English/Latin-1\*(Native keyboard output)

CHINESE GBK ENCODE ( notepad/excel )

UNICODE ENCODE ( Word )

## Invoice Function

Invoice Function OFF \*

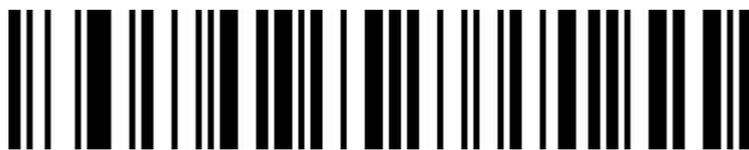

Invoice Function ON \*

In order to ensure the correct output of the invoice content, when turn on invoice function, please configure the Chinese character output to GBK (Notepad/excel), and turn off the function of changing the original content of the barcode, such as CodeID, custom pre/suffix, start character, etc.

## Invoice type option

Special invoice\*

General invoice

# Serial port configuration

\*Successful decode Tone Frequency 1

Successful decode Tone Frequency 2

Successful decode Tone Frequency 3

## Duration of successful decoding

Decoding successful prompt tone 1 (default)

Decoding successful prompt tone 2

## Error Warning Tone Frequency Setting (Tone)

In the event of a data transmission failure, a continuous four-error warning tone will appear, and a single error warning tone will occur when scanning an unrecognized configuration code.

\*Error warning tone frequency low

Medium

High

# Prefix/Suffix Mode Setting

## Prefix

\* Disable Prefix

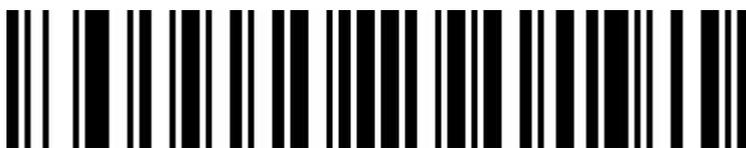

Prefix Setting To "STX"

## Suffix

\* Disable Suffix

"Enter(0x0D)"As Suffix

"Line Feed(0x0A)"As Suffix

“Enter and Line Feed (0x0D 0x0)” As Suffix

“Tab(0x09)” As Suffix

“ETX” As Suffix

## Custom prefix

### Output option

Turn on custom prefix output

Turn off custom prefix output(default)

## Edit

Clear all custom prefix

Custom prefix

(After scanning, please set according to the barcode type ID table and data in the appendix and edit the barcode)

## Custom suffix

### Output option

Turn on custom suffix output

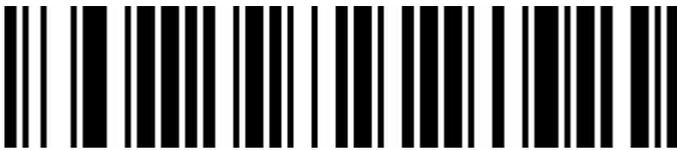

Turn off custom suffix output(default)

## Edit

Clear all custom suffix

Custom suffix

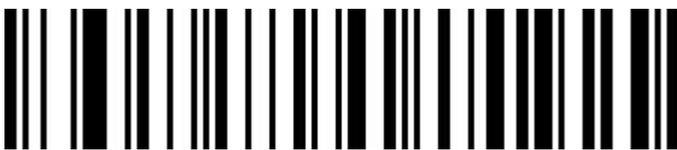

(After scanning, please set according to the barcode type ID table and data in the appendix and edit the barcode)

## Code ID

### Output option

\* Turn Off CODE ID

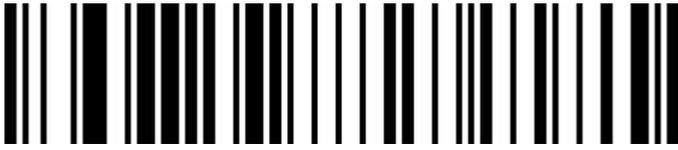

Open ID in front of the code

Open the ID behind the code

## Edit

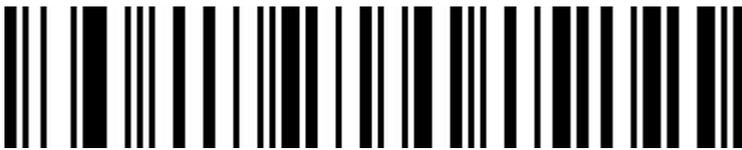

Custom CODE ID

(After scanning, please set according to the barcode type ID table and data in the appendix and edit the barcode)

Clear all custom CODE ID

## AIM ID

Turn off barcode AIM ID ( Default )

Turn on the AIM ID before barcode

Turn on the AIM ID after barcode

## Data editing

The data editing function can customize the barcode content to the 3 fields of Start/Center/End by configuring the length of the Start/End field. Please configure the length and transmission configuration of the Start/End field according to actual needs.

Note: The non-barcode content such as custom prefixes, start characters, end characters, CODE ID, AIM ID, etc. is not affected by the data editing function.

### Transmission configuration

Transfer the complete Data field (default)

Only transfer the Start field

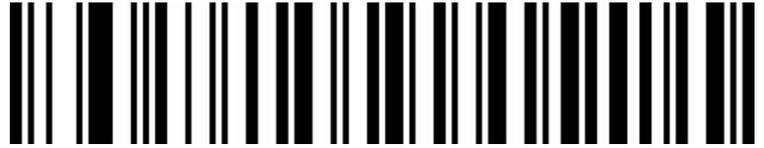

Only transfer the Center field

Only transfer the End field

## Field length configuration

Set Start field length

Set End field length

Note: The field length configuration is in bytes, using decimal data for configuration.

For example: Set the length of the Start field to 10 bytes, scan the barcode to set the length of the Start field, then scan the data in the appendix and edit the barcode 1, 0, save, and complete the configuration

**Performance demonstration barcode (temporary configuration, restart invalid)**

Turn on performance demonstration mode

# Set Positive/Negative Barcodes

(For 1D codes/DataMatrix/Aztec)

Positive bar codes

Negative bar codes

Positive and negative bar codes

## Barcode Type Setting

### Turn On / Turn Off All Barcode

Turn on all bar code types may result in slower decoding speed. It is recommended to open the required bar code type according to the usage scenario. *The default is to turn on all bar codes.*

Turn On All Barcode Types

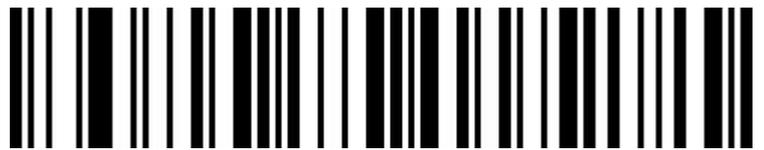

Turn Off All Barcode Types

### Turn on/off all 1D code

Turn on all 1D code

Turn off all 1D code

### Turn on/off all 2D code

Turn on all 2D code

Turn off all 2D code

# Codabar

## Turn on and Turn off Barcode

# Partial functional configuration instructions and examples

## Custom prefix/suffix example

Set the prefix/suffix by scanning the code, each prefix or suffix maximum is 10 characters.(To ensure that the custom prefix/suffix can be output, please scan the barcode “ Turn on the custom prefix/suffix output”)

### Example 1.1 Add a custom prefix XYZ to all types of barcodes

**Check** the appendix barcode type ID list, all barcodes' HEX values are 99. Check the appendix character ASCII list, XYZ's HEX value is 58,59,5A. Scan the barcode “**Custom prefix**”, scanner will make two sounds of “ **Beep..beep**”, next scan data and editing bar code “ **9, 9, 5, 9, 5, A**” in the appendix, then scan barcode “**save**”. It completes the setting process.

If you need to modify the scanned barcode before saving it, scan barcode “**Cancel the previous reading**” or “ **Cancel the string of data read previously**”, it will start to reset again. If you need to abandon this configuration in the middle, scan barcode “ **Cancel current settings**” .

### Example 1.2: Add a custom prefix R to QR codes

Check the appendix barcode type ID list, QR code's HEX values is 51. Check the appendix character ASCII list, R's HEX value is 52. Scan the barcode “**Custom prefix**”, next scan data and editing bar code “ **5 ,1 ,5 ,2**” in the appendix, then scan barcode“**save**”. It completes the setting process.

## Bar code length limit setting example

When setting the minimum length limit of barcode, you must ensure that the minimum length set is not longer than the current maximum length, otherwise scanner will prompt with an error. Similarly, when setting the maximum length limit of barcode, it is necessary to ensure that the maximum length set is not less than the current minimum length.

### Example 2.1: Set the barcode of Code 128 length to 4-12 bits

Scan the barcode “ **Code 128 Minimum length limit**”, next scan the barcode “**4**” in the data and editing of appendix, **then** scan the barcode“ **Save**”.

Scan the barcode “ **Code 128 Maximum length limit**”, next scan the barcode “**1,2**” in the data and editing of appendix, then scan the barcode“ **Save**”.

### Example 2.2: Set the barcode Interleaved 2 of 5 length to 14 bits

Setting the length of Interleaved 2 of 5 to 14 bits can be set directly by scanning quick setting barcode “**ITF25 14 bits length**”, or by setting Bar code maximum minimum length.

Scan the barcode “**Interleaved 2 of 5 Minimum length limit**”, then scan the barcode “**1,4**” in the data and editing

of appendix, then scan the barcode“ **Save**”.

Scan the barcode “**Interleaved 2 of 5 Maximum length limit**”, then scan the barcode “**1,4**” in the data and editing of appendix, then scan the barcode“ **Save**”.

**Example 2.2:** Set the Code 39 barcode length to any length supported

Scan the barcode “**Code 39 Minimum length limit**”, then scan the barcode “**0**” in the data and editing of appendix, then scan the barcode“ **Save**”.

Scan the barcode “**Code 39 Maximum length limit**”, next scan the barcode “**0**” in the data and editing of appendix, then scan the barcode“ **Save**”.

## USB keyboard data transfer speed setting example

If the terminal computer’s performance is not good enough, the situation of transmission errors will happen from time to time, you needs to customize the USB keyboard sending speed to a slower speed.

For example, you want it to be 50ms, then scan the barcode “**Custom sending speed**”, next scan the barcode “**5,0**” in the data and editing of appendix, then scan the barcode“ **Save**”.

## Warning Tone

When the data transfer abnormal, the scanner will have four continuous warning beep, if this happen, please check the cable connection is normal.

## Reading skill

To get the better reading result, The aiming beam from the scanner should be aligned in the middle of the bar code, but can be aimed in any direction for reading.

If barcode is closer to the scanner, the aim beam will be smaller, if the barcode is farther to the scanner, the aiming beam bigger. If the barcode is smaller, it should closer to the scanner; If the barcode is bigger, it should farther to the scanner, which will easier and more correct for reading.

## Safety

The lighting is strong when the scanner is in use, do not look directly at or aim at the eyes to avoid discomfort or injury.
